The Table/Door

1. Push the button to remove the door

2. The leg is stored in the loop. Remove the leg and insert, then clip onto table rail

3. And reverse to store

The cordless tap

1. Insert the tap holder into the hole and tighten up with the black washer and nut on the underside

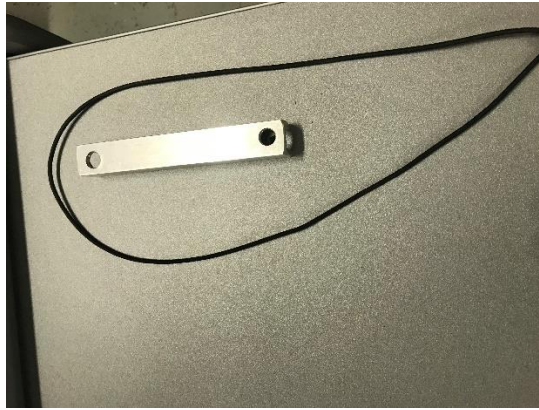

2. Always pre charge prior to a trip the cordless tap via USB and bring a USB charger with you
3. Push the water hose through holder

4. Insert the hose firmly into the bottom of the tap and push the tap into the holder
5. If you have opted for the conventional tap then push the tap nozzle onto the tap and simply plug the 12v plug into your closest power source.

Fixing the stove onto the shelf

1. Line up the channel with the holes

2. Remove the lid from the stove and centralise over the channel

3. Fix down with an allen key

Gas stove

1. Use push button to open the stove shelf
2. And pull out stove support (FULLY) to ensure maximum stability

3. To store the stove push in the stove support and depending on the model of the stove, reverse the top holder and use elastic to secure the hob stand so that it doesn't stick out and catch anything. The elastic also retains the canister flap.

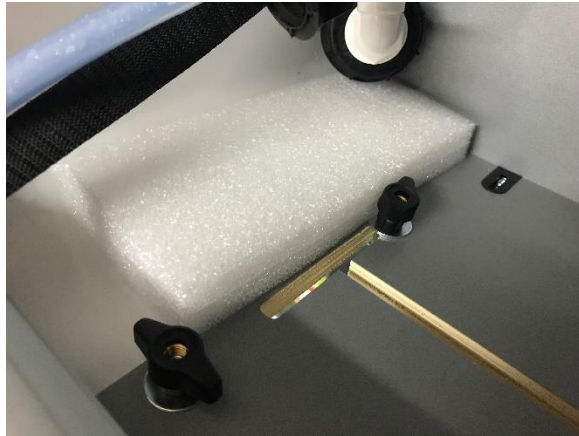

Main Safety Points

- Always ensure the stove support is fully pulled out!
- Always move the stove lever into the unlocked position
- Always wait for the stove to cool down before storing
- Lock the stove when not in use

Fitting

1. If using the bolts, use the mounting slots to secure to the floor. Always dry fit the units first. Take care when drilling through the floor, it is easier to mark where you are drilling with masking tape first.
2. On rails, space apart as far as possible and on one rail
3. Foam can also be used to stop the wing nuts blocking the bottles

Feedback

As this is a new unit we are particularly interested in feedback and photos! Please email any feedback/photos to info@vangear.co.uk
